**SECTION C – Practical applications**

Answer **all** the questions.

**Sesame Street and learnt behaviour?**

*Sesame Street* is an educational TV programme which aims to show that television can have positive effects on young children in preparation for school. Research has shown that viewers of *Sesame Street* were better prepared to learn to read and do arithmetic, and this readiness seemed to be a result of watching the show and not of other variables, such as how educated their parents were or how much they read to their children. The advantage held even through secondary school, with students who had watched the programme at age 5 gaining consistently higher grades in English, mathematics and science compared to those who had not watched the programme at a young age. Longitudinal research has also shown that watching *Sesame Street* is related to gaining a greater sense of competence, being less aggressive and demonstrating more motivation for academic achievement. Teenagers who are less aggressive can take part in school more effectively and will in turn feel good about their achievements because they will be rewarded for their motivation and academic success.

- 7 (a) Identify **one** psychological issue raised by the above article. Support your answer with evidence from the article.
