Wednesday 19 June 2019 – Morning

A Level Chemistry A

H432/03 Unified chemistry

Time allowed: 1 hour 30 minutes

You must have:

- the Data Sheet for Chemistry A (sent with general stationery)

You may use:

- a scientific or graphical calculator

Please write clearly in black ink. **Do not write in the barcodes.**

Centre number

--	--	--	--	--

Candidate number

--	--	--	--

First name(s)

Last name

INSTRUCTIONS

- Use black ink. You may use an HB pencil for graphs and diagrams.
- Answer **all** the questions.
- Where appropriate, your answers should be supported with working. Marks may be given for a correct method even if the answer is incorrect.
- Write your answer to each question in the space provided. If additional space is required, use the lined page(s) at the end of this booklet. The question number(s) must be clearly shown.

INFORMATION

- The total mark for this paper is **70**.
- The marks for each question are shown in brackets [].
- Quality of extended responses will be assessed in questions marked with an asterisk (*).
- This document consists of **20** pages.

2

Answer **all** the questions.

1 These short questions are from different areas of chemistry.

(a) Explain why a CF_4 molecule has polar bonds but does **not** have an overall dipole.

.....
.....
..... [2]

(b) Explain why a small proportion of molecules in water have a relative molecular mass of 20.

.....
.....
..... [1]

(c) What is the partial pressure of O_2 (in Pa) in a gas mixture containing 21% O_2 by volume and with a total pressure of 1.0×10^5 Pa?

partial pressure of $\text{O}_2 = \dots\dots\dots$ Pa [1]

(d) What mass of carbon dioxide (in g) is formed by the complete combustion of 42.0m^3 (measured at RTP) of propane?

mass = $\dots\dots\dots$ g [2]

(e) A reaction is first order with respect to H^+ . At a pH of 1, the initial rate is $2.4 \times 10^{-3} \text{mol dm}^{-3} \text{s}^{-1}$.

What is the initial rate at a pH of 3?

initial rate = $\dots\dots\dots$ $\text{mol dm}^{-3} \text{s}^{-1}$ [1]

3

(f) What is the number of oxygen atoms in 4.26 g of P_2O_5 ?

number of oxygen atoms = [2]

2 Benzoic acid, C_6H_5COOH , is added to some foods as a preservative.

A student prepares benzoic acid as outlined below.

Step 1 The student mixes 4.00 cm^3 of phenylmethanol, $C_6H_5CH_2OH$, (density = 1.04 g cm^{-3}) with sodium carbonate and aqueous potassium manganate(VII), as an oxidising agent. The mixture is heated under reflux.

Step 2 The resulting mixture is cooled and then acidified with concentrated HCl . Impure crystals of benzoic acid appear.

Step 3 The student recrystallises the impure crystals to obtain 1.59 g of pure benzoic acid.

(a) In **Step 1**, sodium carbonate, Na_2CO_3 , makes the reaction mixture alkaline.

Write an ionic equation to show how carbonate ions form an alkaline solution in water.

..... [1]

(b) In **Step 2**, explain why the mixture must be acidified so that crystals of benzoic acid appear.

.....
.....
.....
..... [1]

(c) Write the overall equation for the preparation of benzoic acid from phenylmethanol.

Use [O] for the oxidising agent.

..... [1]

(d) Calculate the percentage yield of benzoic acid.

Give your answer to **3** significant figures.

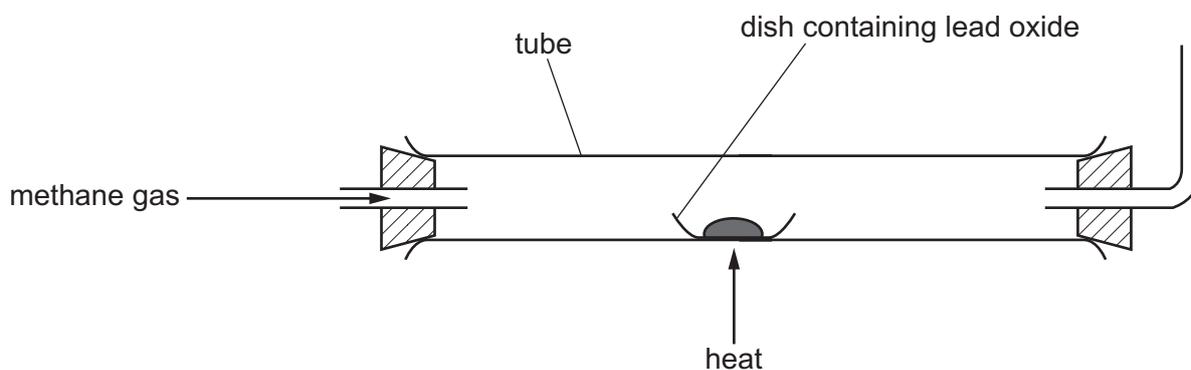

percentage yield = % [3]

3 This question is about elements and compounds in Group 14 (Group 4) of the periodic table.

(a) There are four oxides of lead: PbO , PbO_2 , Pb_2O_3 and Pb_3O_4 .

A student carries out an experiment to identify an unknown lead oxide, which is one of the four oxides of lead shown above.

The student plans to reduce the unknown lead oxide to lead by heating the lead oxide in a stream of methane gas, CH_4 . The apparatus is shown below.

Student's method

- Weigh an empty dish.
Add the lead oxide to the dish and reweigh.
- Set up the apparatus and pass methane gas through the tube as shown.
Heat the dish for 10 minutes.
- Pass cold air through the tube to cool the dish and contents.
- Weigh the dish and contents.

(i) Write the equation for the reduction of Pb_2O_3 with CH_4 .

..... [1]

(ii) The student uses safety glasses and a lab coat.

State, with a reason, **one** other important safety precaution the student should take when carrying out this experiment.

.....

 [1]

(iii) The student was not sure that all the oxygen had been removed from the lead oxide.

Suggest **two** modifications that the student could make to their method to be confident that all the oxygen had been removed. Explain your reasoning.

1

.....

2

.....

[2]

(iv) The student makes suitable modifications to the method and repeats the experiment to obtain the accurate results shown below.

Mass of dish/g	8.364
Mass of dish + lead oxide/g	11.818
Mass of dish + lead at end of experiment/g	11.496

Calculate the empirical formula of the lead oxide.

empirical formula = [2]

(b) SiO₂ and CO₂ are oxides of other Group 14 (Group 4) elements.

Solid SiO₂ melts at 2156 °C. Solid CO₂ melts at -56 °C.

Suggest the type of lattice structure in solid SiO₂ and in solid CO₂ and explain the difference in melting points in terms of the types of force within each lattice structure.

Structure in SiO₂(s)

Structure in CO₂(s)

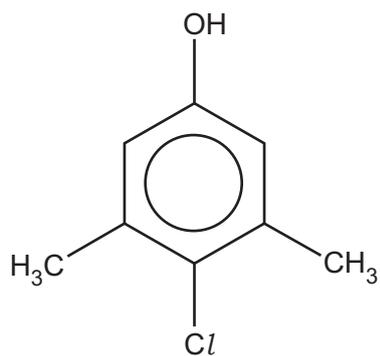

Explanation

.....

..... [4]

- 4 Dettol[®] is a disinfectant containing the antiseptic chloroxylenol, shown below.

chloroxylenol

- (a) Chloroxylenol is a weak Brønsted–Lowry acid.

(i) What is the systematic name of chloroxylenol?

..... [1]

(ii) Predict the number of peaks in a ¹³C NMR spectrum of chloroxylenol.

..... [1]

(iii) Name the functional group responsible for the acidity of chloroxylenol and describe a simple test which would confirm the presence of this group.

Functional group

Test

.....

..... [2]

(iv) A student measures the pH of the contents in a bottle of Dettol[®] as 5.14.

The label on the bottle shows the percentage of chloroxylenol in Dettol[®] as 4.80% i.e. 100 cm³ of Dettol[®] contains 4.80 g of chloroxylenol.

Assume the following:

- Chloroxylenol is the only acidic component in Dettol[®].
- Chloroxylenol is a weak monobasic acid.
- The density of Dettol[®] is 1.00 g cm⁻³.

Write the equation, using molecular formulae, for the acid dissociation of chloroxylenol.

Calculate the acid dissociation constant, K_a , for chloroxylenol.

$K_a = \dots\dots\dots \text{mol dm}^{-3}$ [5]

(iii) α -Terpineol contains two functional groups.

For each functional group, choose a reagent that reacts with that group **only**.
Draw the structures for the organic products of the reactions.

Show structures for organic compounds.

Reagent(s)

Name of functional group that reacts

Structure of organic product

Reagent(s)

Name of functional group that reacts

Structure of organic product

[4]

5 This question is about copper(II) sulfate, CuSO_4 , and sodium thiosulfate, $\text{Na}_2\text{S}_2\text{O}_3$.

- (a) The enthalpy change of reaction, $\Delta_r H$, for converting anhydrous copper(II) sulfate to hydrated copper(II) sulfate is difficult to measure directly by experiment.

The enthalpy changes of solution of anhydrous and hydrated copper(II) sulfate can be measured by experiment. The reactions are shown below.

In the equations, 'aq' represents an excess of water.

Experiment 1

A student carries out an experiment to find $\Delta_{\text{sol}} H(\text{CuSO}_4(\text{s}))$ for **reaction 5.2**.

Student's method

- Weigh a bottle containing $\text{CuSO}_4(\text{s})$ and weigh a polystyrene cup.
- Add about 50 cm^3 of water to the polystyrene cup and measure its temperature.
- Add the $\text{CuSO}_4(\text{s})$, stir the mixture, and measure the final temperature.
- Weigh the empty bottle and weigh the polystyrene cup with final solution.

Mass readings

Mass of bottle + $\text{CuSO}_4(\text{s})/\text{g}$	28.04
Mass of empty bottle/g	20.06
Mass of polystyrene cup/g	23.43
Mass of polystyrene cup + final solution/g	74.13

Temperature readings

Initial temperature of water/ $^{\circ}\text{C}$	20.5
Temperature of final solution/ $^{\circ}\text{C}$	34.0

Experiment 2

The student carries out a second experiment with $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ (**reaction 5.3**). The student uses the same method as in **Experiment 1**.

The student calculates $\Delta_{\text{sol}} H(\text{CuSO}_4 \cdot 5\text{H}_2\text{O}(\text{s}))$ as $+8.43 \text{ kJ mol}^{-1}$.

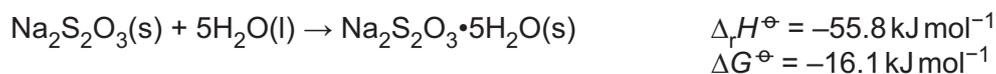

- (ii) The thermometer had an uncertainty in each temperature reading of $\pm 0.1^\circ\text{C}$.

The student calculates a 20% uncertainty in the temperature change in **Experiment 2**.

Calculate the temperature change in **Experiment 2**.

temperature change = $^\circ\text{C}$ [1]

- (b) The standard enthalpy change of reaction, $\Delta_r H^\ominus$, and the standard free energy change, ΔG^\ominus , for converting anhydrous sodium thiosulfate to hydrated sodium thiosulfate are shown below.

Standard entropies are given in the table.

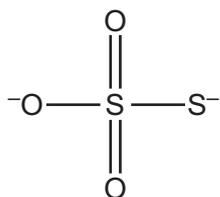

Compound	$S^\ominus / \text{JK}^{-1} \text{mol}^{-1}$
$\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}(\text{s})$	372.4
$\text{H}_2\text{O}(\text{l})$	69.9

Determine the **standard** entropy, S^\ominus , of anhydrous sodium thiosulfate, $\text{Na}_2\text{S}_2\text{O}_3(\text{s})$.

Give your answer to **3** significant figures.

$S^\ominus = \dots\dots\dots \text{JK}^{-1} \text{mol}^{-1}$ [4]

- (c) Sodium thiosulfate contains the thiosulfate ion, $\text{S}_2\text{O}_3^{2-}$.
The displayed formula of $\text{S}_2\text{O}_3^{2-}$ can be shown as below.

thiosulfate ion

- (i) Predict the O–S–S bond angle and name of the shape of the thiosulfate ion.

Bond angle

Name of shape

[1]

- (ii) In some of its reactions, the thiosulfate ion forms the tetrathionate ion, $\text{S}_4\text{O}_6^{2-}$.

The $\text{S}_4\text{O}_6^{2-}$ ion is a 'dimer' of $\text{S}_2\text{O}_3^{2-}$.

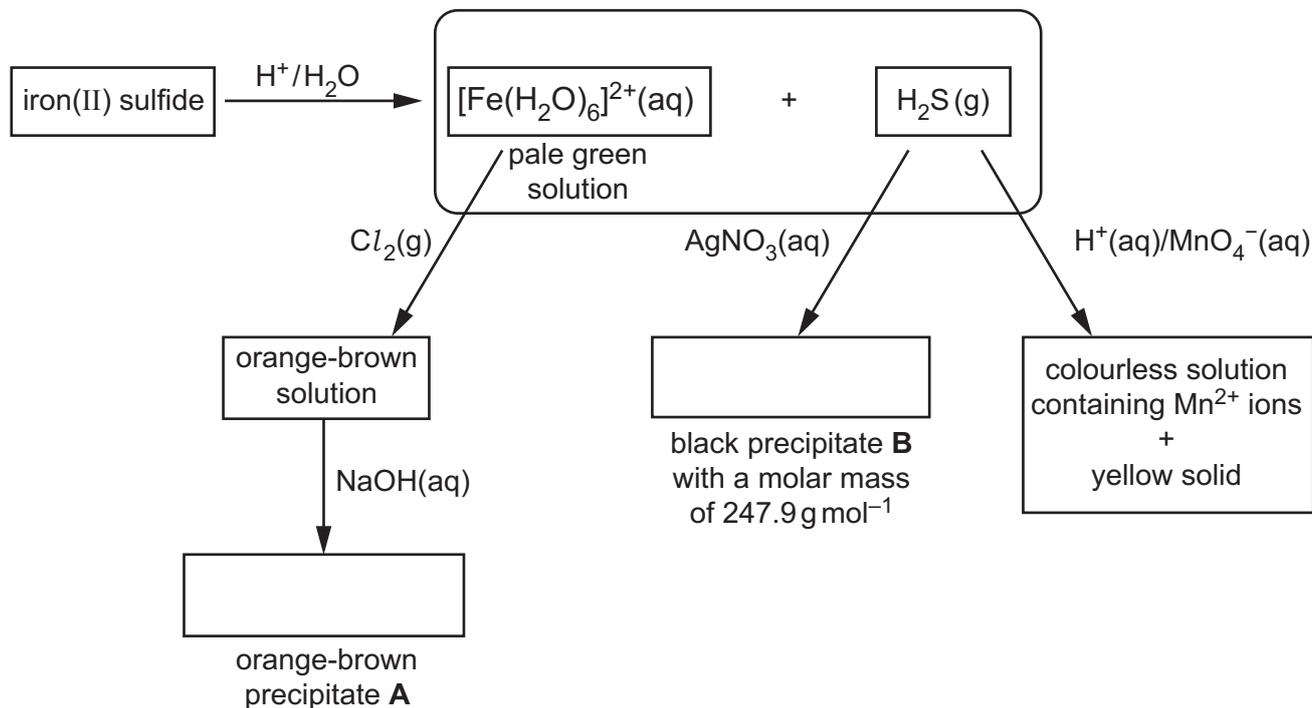

Draw a displayed formula for the $\text{S}_4\text{O}_6^{2-}$ ion.

[1]

PLEASE DO NOT WRITE ON THIS PAGE

6 This question is about reactions of iron compounds.

(a) A student carries out the reactions in the flowchart, starting with iron(II) sulfide.

(i) In the boxes, write the formulae of **A** and **B**. [2]

(ii) The student thinks that the reaction of iron(II) sulfide with $\text{H}^+/\text{H}_2\text{O}$ is a redox reaction.

Explain, with reasons, whether the student is correct.

.....

.....

.....

..... [1]

(iii) Write the equation for the reaction of $[\text{Fe}(\text{H}_2\text{O})_6]^{2+}(\text{aq})$ with $\text{Cl}_2(\text{g})$.

..... [1]

(iv) Construct an equation for the reaction of $\text{H}_2\text{S}(\text{g})$ with $\text{H}^+(\text{aq})/\text{MnO}_4^-(\text{aq})$.

Additional answer space if required.
