AS ECONOMICS

Paper 1 The Operation of Markets and Market Failure

Monday 13 May 2019 Morning Time allowed: 1 hour 30 minutes

Materials

For this paper you must have:

- the insert
- a calculator.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions in **Section A**.
- Answer **either** Context 1 **or** Context 2 in **Section B**.
- You will need to refer to the insert provided to answer **Section B**.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The maximum mark for this paper is 70.
- The marks for questions are shown in brackets.
- No deductions will be made for wrong answers.

For Examiner's Use	
Question	Mark
Section A	
Section B	
TOTAL	

Section A

Answer **all** questions in this section.

Only **one** answer per question is allowed.

For each answer completely fill in the circle alongside the appropriate answer.

CORRECT METHOD  WRONG METHODS    

If you want to change your answer you must cross out your original answer as shown. 

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown. 

0 1 Which one of the following best describes the basic economic problem?

- A** Living standards are low for many people 
- B** Resources are being depleted too rapidly 
- C** Resources are scarce relative to needs and wants 
- D** Resources are unequally distributed 

[1 mark]

0 2 A rise in the price of blueberries from £8 to £10 per kg encourages growers to increase their supply from 12 kg to 21 kg each week. Other things remaining the same, this suggests that the price elasticity of supply for blueberries is

- A** 0.22 
- B** 0.33 
- C** 3 
- D** 4.5 

[1 mark]

0 3

The following diagram shows the free market supply (S) and demand (D_1) for a good when there is imperfect information. D_2 shows the level of demand if consumers had full information about the effects of consuming the good.

Which one of the following government policies is most likely to result in the social optimum level of consumption?

- A A maximum price equal to P_3
- B A minimum price equal to P_2
- C A subsidy per unit equal to $P_1 - P_2$
- D A tax per unit equal to $P_3 - P_2$

0 4

Firms in the steel industry in an economy move abroad to where costs are lower. The redundant steel workers are occupationally immobile. This situation represents a market failure because

- A domestic steel production is replaced by imported steel.
- B some factors of production will not be fully employed.
- C there is no government provision of training schemes.
- D there will be underproduction of a merit good.

05

A government plans to build a new road to bypass a small town. The table below shows the costs and benefits of two possible routes for the new road.

	'Blue route'	'Green route'
	£ million	
Private costs	44	34
Private benefits	72	46
External costs	9	8
External benefits	18	17

The government intends to choose the route that has the higher ratio of social benefits to social costs. This ratio (correct to one decimal place) is

- A 1.5:1

☐
- B 1.7:1

☐
- C 2.0:1

☐
- D 2.1:1

06

The market for crab sandwiches experiences an increase in the price and an increase in the output of crab sandwiches. Which of the following combinations of events is the only one that could have caused these changes?

- A A fall in the price of tuna sandwiches and a fall in the price of crab

☐
- B A new tax on food packaging and a fall in labour productivity

☐
- C A rise in the price of prawn sandwiches and a rise in the price of bread

☐
- D New entry of firms into the sandwich market and a reduction in the minimum wage

☐

[1 mark]

07

A construction firm uses workers, machines and raw materials to build new houses. One year the firm builds 20 more houses than in the previous year. It can be concluded that there must have been an increase in

- A employment.

☐
- B production.

☐
- C productive efficiency.

☐
- D productivity.

☐

08

The following table shows the market shares of the five leading manufacturers in a particular industry.

Manufacturer	Market share (%)
Firm A	13
Firm B	24
Firm C	11
Firm D	15
Firm E	7
Others	30

If Firm A and Firm C combine to become one firm, what happens to the three-firm concentration ratio and the five-firm concentration ratio?

	Three-firm concentration ratio	Five-firm concentration ratio	
A	Falls	Falls	☐
B	Falls	Rises	☐
C	Rises	Falls	☐
D	Rises	Rises	☐

Two large firms dominate the market for manufacturing rail track. This means that

- A abuse of monopoly power will result in diseconomies of scale. ☐
- B barriers to entry are low as neither firm is a pure monopoly. ☐
- C neither firm has monopoly power but benefits from economies of scale. ☐
- D the two firms have monopoly power but may also compete. ☐

1 1

A clothes retailer has experimented with changing the prices of various items of clothing sold in their shop. The table below shows the different prices per item in 2 years.

	Year 1	Year 2
Socks	£6	£8
T-shirts	£15	£11
Trainers	£40	£42
Trousers	£33	£38

Other things being equal, which one of the following changes from **Year 1** to **Year 2** is the retailer most likely to experience?

- A A decrease in revenue from socks if the price elasticity of demand is minus one

☐
- B A decrease in revenue from T-shirts if the price elasticity of demand is elastic

☐
- C An increase in revenue from trainers if the price elasticity of demand is inelastic

☐
- D An increase in revenue from trousers if the price elasticity of demand is elastic

☐

The following table shows the price of spaghetti in 3 years.

Year	Price of spaghetti £ per 500 g
1	3.09
2	2.75
3	2.60

Over the 3 years, it can be concluded that there has been a fall in

- A the average cost of producing spaghetti.

☐
- B the average revenue from sale of spaghetti.

☐
- C the consumer demand for spaghetti.

☐
- D the total revenue from sale of spaghetti.

☐

5

 Which one of the following is a true statement about market structures?

Market structures

- A

 are partly defined by the number of firms in the market.
- B

 are the rules imposed by governments which limit how firms behave.
- C

 include concentrated markets but not competitive markets.
- D

 include markets for goods but not markets for services.

6

 The following diagram shows demand and supply in the market for roses. The demand for roses shifts from D_1 to D_2 .

Other things remaining the same, it can be concluded that

- A

 monopoly suppliers have pushed up the price of roses.
- B

 the higher price of roses will cause demand to fall back to D_1 .
- C

 the income elasticity of demand for roses is positive.
- D

 there is greater incentive to supply roses.

1 7

A government sets a maximum price below the current market price for rented housing. The likely long-run consequence is that

- A** fewer people can live in rented housing.
- B** the rationing function of prices will improve.
- C** there will be a fall in supply of owner-occupied housing.
- D** there will be excess supply of rented housing.

☐☐☐☐**[1 mark]****1 8**

The following diagram shows the long-run average cost curve (LRAC) for a firm.

From the diagram it can be concluded that

- A** average fixed costs will fall and then rise.
- B** economies of scale are present at some levels of output.
- C** the firm will inevitably experience diseconomies of scale.
- D** total costs must first fall and then rise.

2 0

An economy produces racing cars and robots. The economy’s initial production possibility frontier (PPF₁) is shown in the diagram below.

The economy’s production possibility frontier shifts to PPF₂ and as a result of this change the

- A number of racing cars that can be produced for each robot given up has increased.

☐
- B opportunity cost of producing robots is now lower.

☐
- C output of racing cars will be higher than the output of robots.

☐
- D productive efficiency of producing robots has risen.
