GCSE PHYSICS

Н

Higher Tier Paper 2

Time allowed: 1 hour 45 minutes

Materials

For this paper you must have:

- a ruler
- a scientific calculator
- a protractor
- the Physics Equations Sheet (enclosed).

Instructions

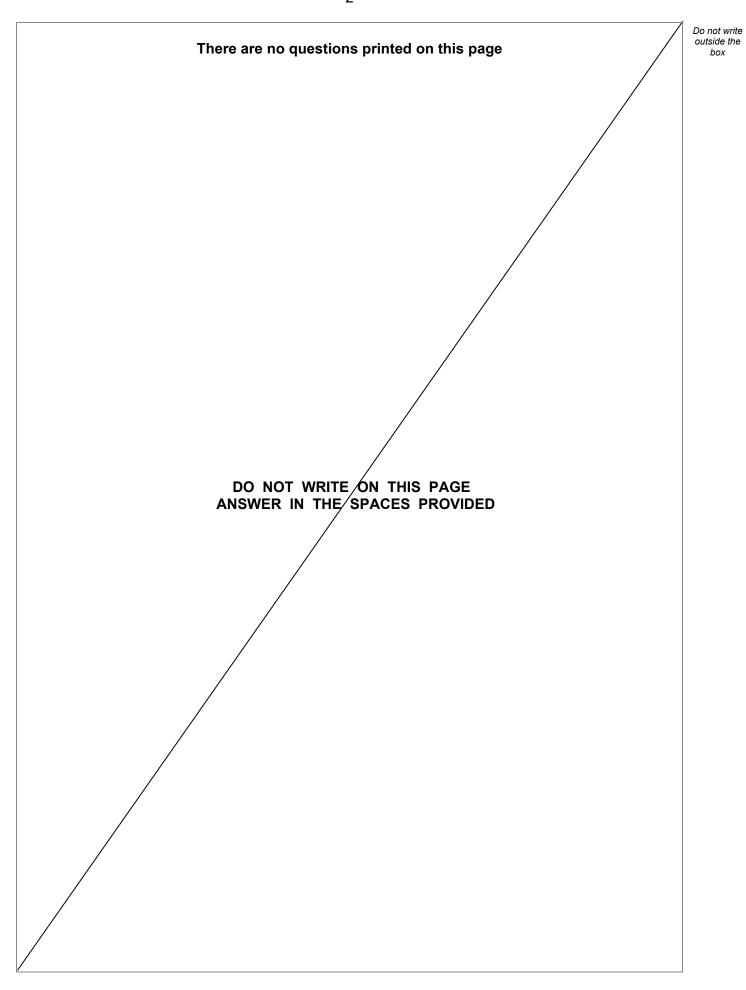

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided.
- Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked
- In all calculations, show clearly how you work out your answer.

Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

TOTAL			

	Answer all questions in the spaces provided.
1	The thinking distance and braking distance for a car vary with the speed of the car.
1.1	Explain the effect of two other factors on the braking distance of a car.
	Do not refer to speed in your answer. [4 marks]
	Question 1 continues on the next page

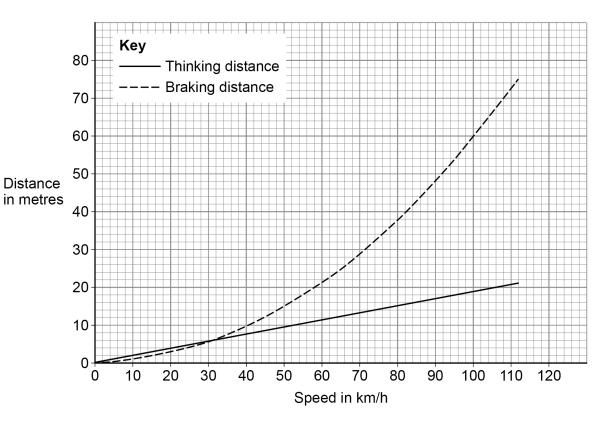

0 1.2	Which equation links acceleration (a), mass (m) and resultant force (F). Tick (\checkmark) one box.	[1 mark]
	resultant force = mass × acceleration	
	resultant force = mass × acceleration ²	
	resultant force = $\frac{\text{mass}}{\text{acceleration}^2}$	
	resultant force = $\frac{\text{mass}}{\text{acceleration}}$	
0 1.3	The mean braking force on a car is 7200 N.	
	The car has a mass of 1600 kg.	
	Calculate the deceleration of the car.	[3 marks]
	Deceleration =	m/s²

0	1	4

Figure 1 shows how the thinking distance and braking distance for a car vary with the speed of the car.

Figure 1

D	etermine	the	stopping	distance	when t	he d	car is	travelling	at 80	km/h.

[2 marks]

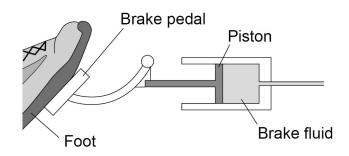

Stopping distance = ____ m

Question 1 continues on the next page

Figure 2 shows part of the braking system for a car.

Figure 2

0 1. S Which equation links area of a surface (A), the force normal to that surface (F) and pressure (p).

[1 mark]

Tick (✓) one box.

$$p = F \times A$$

$$p = F \times A^2$$

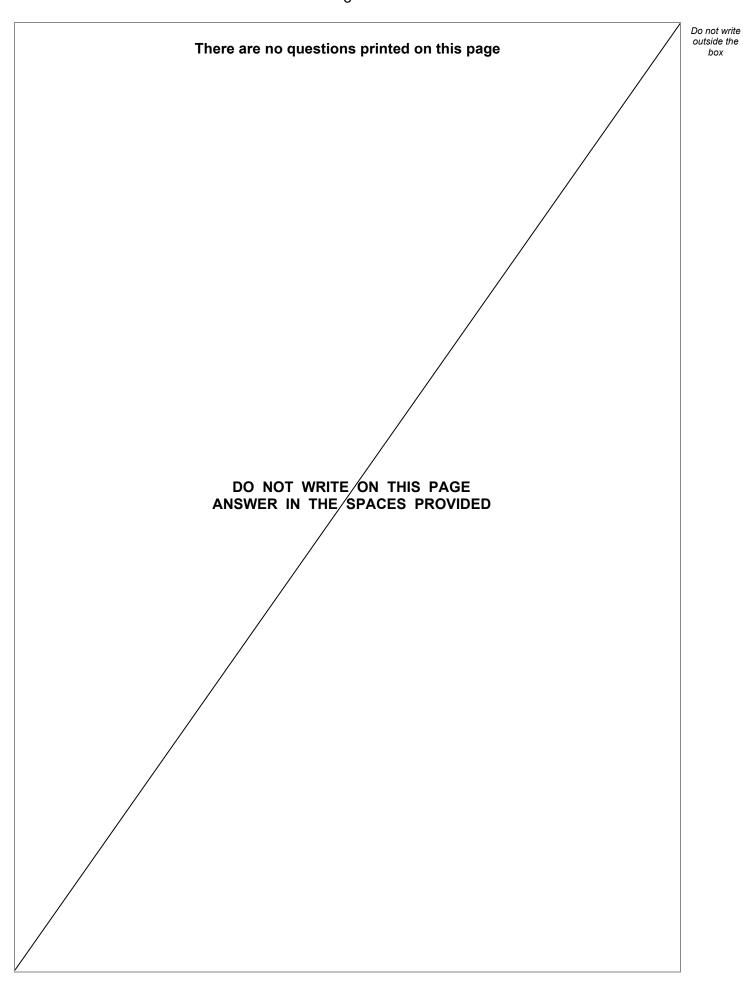

$$p = \frac{F}{A}$$

$$p = \frac{A}{F}$$

0 1.6	When the brake pedal is pressed, a force of 60 N is applied to the piston.		Do not write outside the box
	The pressure in the brake fluid is 120 000 Pa.		
	Calculate the surface area of the piston.		
	Give your answer in standard form.		
	Give the unit.	[5 marks]	
	,		
	Surface area (in standard form) = Unit		16

0 2	2	Figure 3 shows a child on a playground t	Юy
-----	---	------------------------------------------	----

Figure 3

0 2 . 1	The springs have been elastically deformed.	
	Explain what is meant by 'elastically deformed'.	[2 marks]

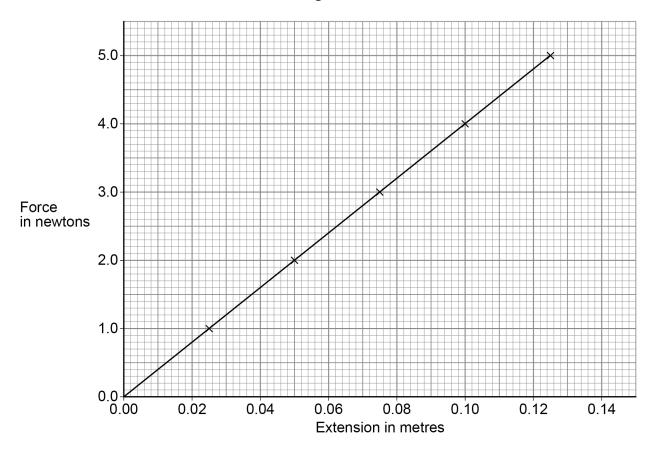

Question 2 continues on the next page

A student investigated the relationship between the force applied to a spring and the extension of the spring.

Figure 4 shows the results.

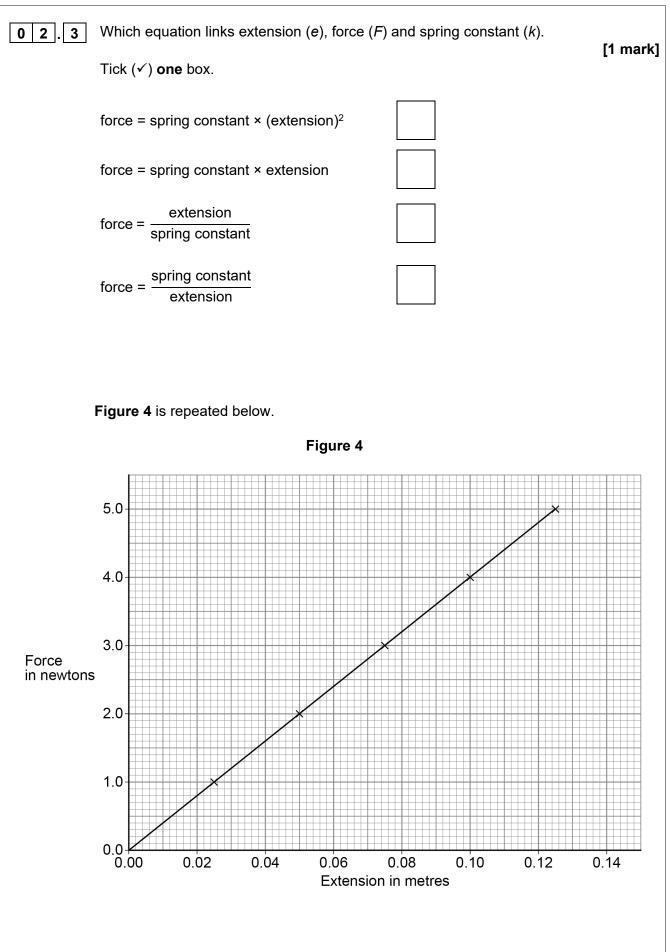

0 2 . 2	Describe a method the student could use to obtain the results given in Figure 4 .	Do not write outside the box
	You should include a risk assessment for one hazard in the investigation.	
	Your answer may include a diagram. [6 marks]	
	Question 2 continues on the next page	

nark]	Do not write outside the box

0 2 . 4	Determine the spring constant of the spring.	Do not write outside the box
	Use Figure 4.	
	[3 marks]	
	Spring constant = N/m	
	Spring constant = N/m	
0 2 . 5	The student concluded:	
	'The extension of the spring is directly proportional to the force applied to the spring.'	
	Describe how Figure 4 supports the student's conclusion.	
	[2 marks]	
	Question 2 continues on the next page	

0 2.6	The student repeated the investigation using a different spring with a spring constant of 13 N/m.	Do not write outside the box
	Calculate the elastic potential energy of the spring when the extension of the spring was 20 cm.	
	Use the Physics Equations Sheet.	
	[3 marks]	
	Elastic potential energy = J	17

Do not write outside the box Turn over for the next question DO NOT WRITE ON THIS PAGE ANSWER IN THE SPACES PROVIDED

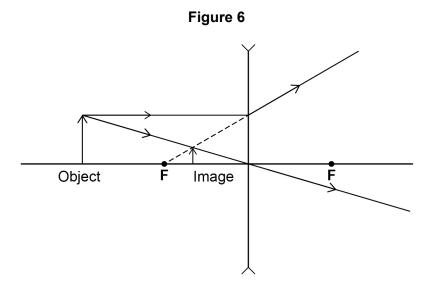

0 3	A main sequence star in a distant galaxy is the same size and mass as the Sur	٦.
0 3.1	Explain why the star is stable while it is in the main sequence stage of its life cy	/cle. marks]
0 3.2	Describe what will happen to the star between the main sequence stage and the of the star's life cycle.	e end
	You should include the names of the stages in the life cycle of the star. [3	marks]

0 3.3	Figure 5 shows how the speed of galaxies moving away from Earth varies we distance of the galaxies from Earth.		o not write utside the box
	Figure 5		
	Speed of galaxy moving away from Earth		
	× × × × × × × × × × × × × × × × × × ×		
	Distance of galaxy from Earth		
	Which galaxy would show the smallest observed change in the wavelength ovisible light?	of	
	Give a reason for your answer.	[2 marks]	
	Tick (✓) one box.	[2 marks]	
	A B C D

- 0 4 Lenses are used to form images of objects.
- **0 4** . **1 Figure 6** shows how a concave lens forms an image of an object.

The image of the object in **Figure 6** is upright.

Give **two** other words that describe the image.

[1 mark]

1

2

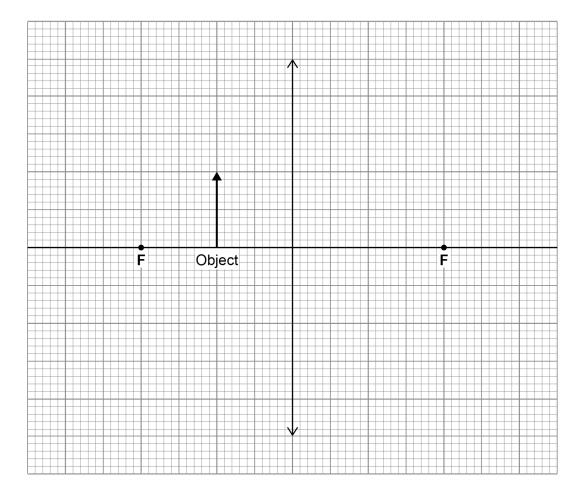

0 4.2 Figure 7 shows an object near to a convex lens.

Complete the ray diagram to show how the image is formed.

Use an arrow to represent the image.

[3 marks]

Figure 7

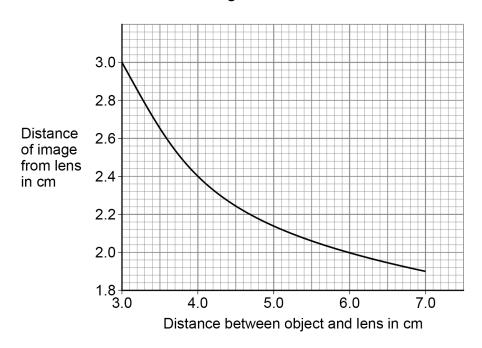

Question 4 continues on the next page

The position of an image formed by a convex lens varies with the distance between the object and the lens.

Figure 8 shows the results of a student's investigation using a convex lens.

Figure 8

0 4 . 3	Describe how the distance of the image from the lens decreases as the distance between the object and the lens increases.	;
	•	mark]

0 4 . 4	The student measured the distance	e from the	image to the l	ens four times.		Do not writ outside the box
	The distance between the object a	nd the len	s did not chan	ge.		
	The 4 measurements from the image	ge to the l	ens were:			
	1.9 cm 1.7	7 cm	2.2 cm	1.4 cm		
	Calculate the uncertainty in the me	asuremer	nts.		[2 marks]	
		Uno	certainty = ±		cm	
			, _			
0 4 . 5	Figure 9 shows a spotlight contain	ing a conv	ex lens.			
	A red filter is placed in front of the s	spotlight.				
	The spotlight is directed at a blue of	bject.				
	Fig	jure 9				
	Spotlight	Red filt	er - ue object			
	Explain why the blue object appear	rs black.			[3 marks]	

0 5	Ultraviolet is a type of electromagnetic wave.
0 5.1	Give one use of ultraviolet. [1 mark]
0 5.2	An ultraviolet wave has a wavelength of 300 nanometres. Which of the following is equal to 300 nanometres? [1 mark] Tick (✓) one box.
	$3 \times 10^{7} \mathrm{m}$ $3 \times 10^{-7} \mathrm{m}$ $3 \times 10^{9} \mathrm{m}$ $3 \times 10^{-9} \mathrm{m}$
0 5.3	The speed of ultraviolet waves is 3 × 10 ⁸ m/s. Calculate the frequency of the ultraviolet wave. Use your answer to Question 05.2 [3 marks]
	Frequency = Hz

0 5 . 4

Table 1 gives the wavelength of an ultraviolet wave and three other electromagnetic waves.

Table 1

	Ultraviolet	Wave E	Wave F	Wave G
Wavelength in nanometres	300	0.1	600	100 000

Draw one line from each wave to the name of the wave.

Wave

[1 mark]

Name

	Wave E	Infrared	
	Wave F	Visible light	
	Wave G	X-rays	
0 5 . 5	Electromagnetic waves are transverse.		
	Some other types of wave are longitudinal.		
	Describe the difference between transverse and lon	gitudinal waves.	
			[2 marks]

Turn over ▶

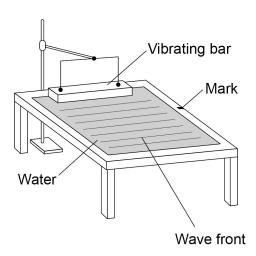

8

0 6

A teacher demonstrated some features of waves using a ripple tank.

Figure 10 shows the ripple tank.

Figure 10

The teacher measured the time taken for 10 wave fronts to pass the mark.

The teacher repeated this measurement three times and calculated the mean.

What is the advantage of repeating measurements and calculating a mean?

[1 mark]

0 6 . 2	The teacher's measurements for the time taken for 10 wave fronts to pass the mark were:				
	8.4	s	7.8 s	8.1 s	
	Calculate the mean frequency	uency of the wav	e.		
	Give your answer to 2 si	gnificant figures.		[5	marks]
	Mea	an frequency (2 s	significant figures)) =	Hz
0 6.3	In a different investigatio in the ripple tank.	n, the teacher w	anted to determin	e the speed of water	waves
	The teacher did not mea	sure the wavele	ngth of the wave.		
	Explain how the teacher	could determine	the speed of the		marks]

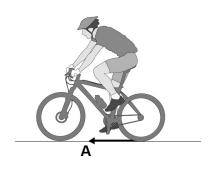

0 7

Figure 11 shows a cyclist riding a bicycle.

Force ${\bf A}$ causes the bicycle to accelerate forwards.

Figure 11

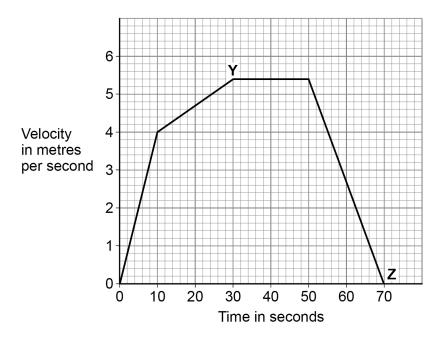

0 7.1 What name is given to force **A**?

[1 mark]

Figure 12 shows how the velocity of the cyclist changes during a short journey.

Figure 12

Do not write
outside the
hov

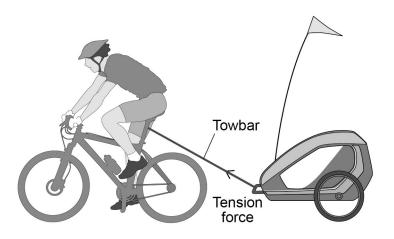

0 7.2	Determine the distance travelled by the cyclist between Y and Z .	[3 marks]
	Distance travelled by the cyclist between Y and Z =	m
0 7.3	Figure 13 shows the gears on the bicycle.	
	Figure 13	
F	Pedal Pedal axle Pedal axle Back wheel	
	Describe how the force on the pedal causes a moment about the rear axle.	[2 marks]
	Question 7 continues on the next page	

Do not write outside the box

Figure 14 shows a different cyclist towing a trailer.

Figure 14

0 7 . 4	The speed of the cyclist and trailer increased uniformly from 0 n	n/s to 2.4 m/s.
	The cyclist travelled 0.018 km while accelerating.	
	Calculate the initial acceleration of the cyclist.	[3 marks]
	Acceleration =	m/s²

horizontal force		
vertical force =	= 75 N	
Determine the trailer by drawi	magnitude and direction of the resultant force of the ing a vector diagram.	
		[4 marks]

0 8 A student made a moving-coil loudspeaker.

Figure 15 shows a diagram of the loudspeaker.

Figure 15

0 8.1 What is the name of the effect used by the moving-coil loudspeaker to produce sound waves?

[1 mark]

Question 8 continues on the next page	

7

0 8 . 3

A student investigated how the loudness of sound from the loudspeaker depends on:

- the number of turns on the coil
- the frequency of the supply.

Table 2 shows the results.

Table 2

Number of turns	Frequency of supply in Hz	Loudness of sound in arbitrary units
100	200	32
200	400	47
300	600	63

Explain why the results cannot be used to make a valid conclusion.	[2 marks]

Do not write outside the box Turn over for the next question DO NOT WRITE ON THIS PAGE ANSWER IN THE SPACES PROVIDED

0 9

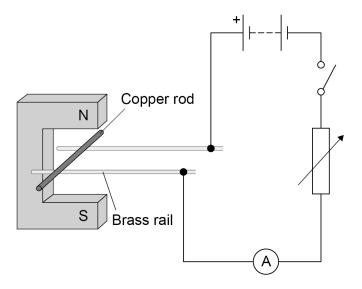

A teacher demonstrated how a magnetic field can cause a copper rod to accelerate.

The teacher placed the copper rod on two brass rails in a magnetic field.

The copper rod was able to move.

Figure 16 shows the equipment used.

Figure 16

0 9 . 1	The teacher closes the switch and the copper rod accelerates.	
	Explain how Fleming's left hand rule can be used to predict the direction in whic copper rod will move.	
	[5 r	marks]
0 9 . 2	Suggest two changes to the equipment that would increase the force on the copper rod.	
		marks]
	1	
	2	
	Question 9 continues on the next page	

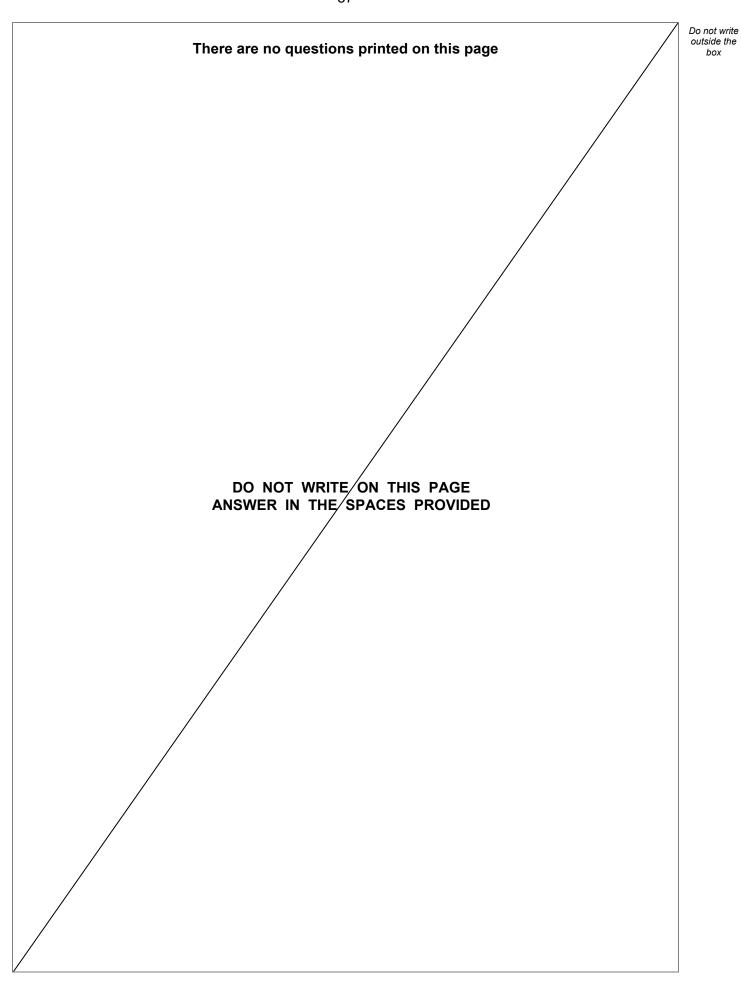

Turn over ▶

0 9

The teacher closed the switch and the copper rod accelerated uniformly fro for 0.15 s.	m rest
The current in the copper rod was 1.7 A.	
mass of copper rod = 4.0 g	
length of copper rod in the magnetic field = 0.050 m	
magnetic flux density = 0.30 T	
Calculate the maximum possible velocity of the copper rod when it left the magnetic field.	
	[6 marks]
Maximum velocity =	m/s

END OF QUESTIONS

Question number	Additional page, if required. Write the question numbers in the left-hand margin.

Question number	Additional page, if required. Write the question numbers in the left-hand margin.
