# A-level CHEMISTRY

Paper 1 Inorganic and Physical Chemistry

Time allowed: 2 hours

#### **Materials**

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105.

For Examiner's Use

TOTAL		

- Answer all questions in the spaces provided.
- **0** 1 This question is about enthalpy changes for calcium chloride and magnesium chloride.
- 0 1 . 1 State the meaning of the term enthalpy change.

[1 mark]

Figure 1 shows an incomplete Born–Haber cycle for the formation of calcium chloride.

Figure 1

$$Ca^{2+}(g) + 2e^{-} + 2Cl(g)$$

$$Ca^{+}(g) + e^{-} + Cl_{2}(g)$$

$$Ca(g) + Cl_{2}(g)$$

$$CaCl_{2}(s)$$

O 1 . 2 Complete **Figure 1** by writing the formulas, including state symbols, of the appropriate species on each of the three blank lines.

[3 marks]

0 1 . 3 Table 1 shows some enthalpy data.

## Table 1

	Enthalpy change / kJ mol <sup>-1</sup>
Enthalpy of formation of calcium chloride	<del>-</del> 795
Enthalpy of atomisation of calcium	+193
First ionisation energy of calcium	+590
Second ionisation energy of calcium	+1150
Enthalpy of atomisation of chlorine	+121
Electron affinity of chlorine	-364

Use **Figure 1** and the data in **Table 1** to calculate a value for the enthalpy of lattice dissociation of calcium chloride.

[2 marks]

Enthalpy of lattice dissociation kJ mol<sup>-1</sup>

Iron reacts with dilute hydrochloric acid to form iron(II) chloride and hydrogen.

$$Fe(s) + 2 \, HCl(aq) \rightarrow FeCl_2(aq) + H_2(g)$$

A 0.998 g sample of pure iron is added to 30.0 cm<sup>3</sup> of 1.00 mol dm<sup>-3</sup> hydrochloric acid.

One of these reagents is in excess and the other reagent limits the amount of hydrogen produced in the reaction.

Calculate the maximum volume, in  $m^3$ , of hydrogen gas produced at 30 °C and 100 kPa.

Give your answer to 3 significant figures.

In your answer you should identify the limiting reagent in the reaction.

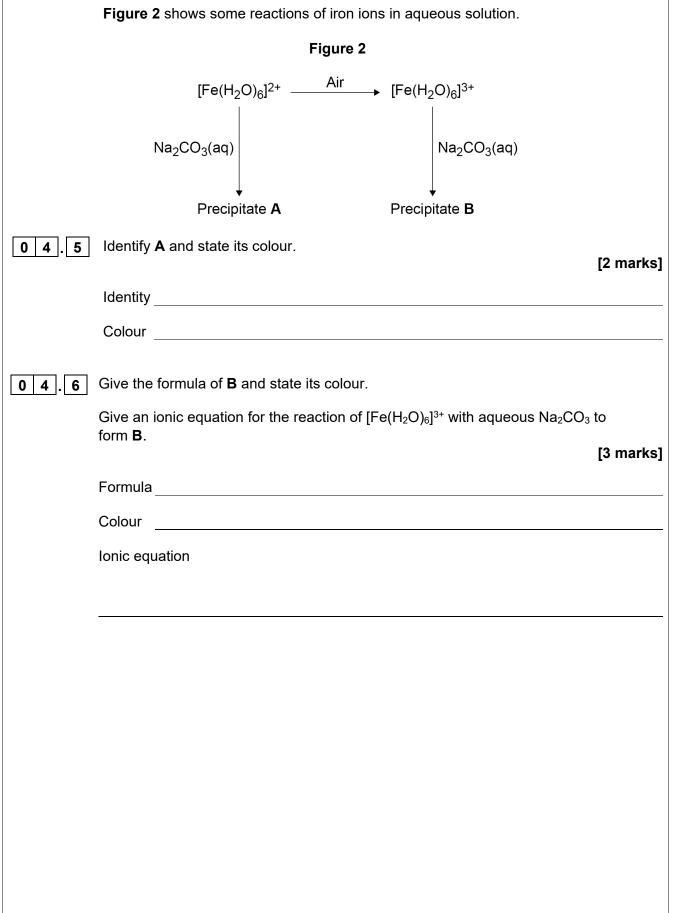

The gas constant,  $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$ 

[6 marks]

Volume of hydrogen	m

	Calculation	
	pH	
	Explanation	
	Question 6 continues on the next page	

A pH meter is calibrated using a calibration graph.

To create the calibration, the pH meter is used to measure the pH of separate solutions, each with a known, accurate pH.

Figure 3 shows the calibration graph.

0 6 . 4 Use **Figure 3** to give the true pH value when the pH meter reading is 5.6 [1 mark]

Suggest why the pH probe is washed with distilled water between each of the calibration measurements.

[1 mark]

0 6 . 6

The calibrated pH meter is used to monitor the pH during a titration of hydrochloric acid with sodium hydroxide.

Explain why the volume of sodium hydroxide solution added between each pH measurement is smaller as the end point of the titration is approached.

[1 mark]

**Figure 4** shows the pH curve for a titration of hydrochloric acid with sodium hydroxide solution.

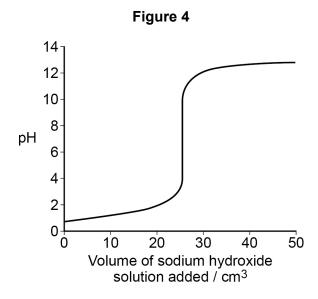

Table 6 shows data about some indicators.

Table 6

Indicator	pH range	Colour at low pH	Colour at high pH
Bromocresol green	3.8 – 5.4	yellow	blue
Phenol red	6.8 – 8.4	yellow	red
Thymolphthalein	9.3 – 10.5	colourless	blue

The student plans to do the titration again using one of the indicators in **Table 6** to determine the end point.

0 6 . 7

State why all three of the indicators in **Table 6** are suitable for this titration.

[1 mark]
