# A-level CHEMISTRY

Paper 3

Time allowed: 2 hours

## **Materials**

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- · All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

# Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 90.

### **Advice**

You are advised to spend 70 minutes on Section A and 50 minutes on Section B.

Section B			
ΤΟΤΔΙ			

Section A					
	Answer all questions in this section.				
0 1	This question is about ethanedioic acid (HOOCCOOH) and the ethanedioate ion (-OOCCOO-).				
0 1.1	Ethanedioic acid reacts with propane-1,3-diol (HOCH <sub>2</sub> CH <sub>2</sub> CH <sub>2</sub> OH) to form a polyester.				
	Draw the repeating unit of this polyester.  [2 marks]				
0 1 . 2	Explain why polyesters are biodegradable but polyalkenes are not biodegradable.  [2 marks]				

Do not write

box

0	1	3	

Sodium ethanedioate is used to find the concentration of solutions of potassium manganate(VII) by titration. The equation for this reaction is

$$2 \text{ MnO}_4^- + 16 \text{ H}^+ + 5 \text{ C}_2 \text{O}_4^{2-} \rightarrow 2 \text{ Mn}^{2+} + 8 \text{ H}_2 \text{O} + 10 \text{ CO}_2$$

A standard solution is made by dissolving 162 mg of  $Na_2C_2O_4$  ( $M_r = 134.0$ ) in water and making up to 250 cm<sup>3</sup> in a volumetric flask.

25.0 cm<sup>3</sup> of this solution and an excess of sulfuric acid are added to a conical flask. The mixture is warmed and titrated with potassium manganate(VII) solution. The titration is repeated until concordant results are obtained.

The mean titre is 23.85 cm<sup>3</sup>

Calculate the concentration, in mol dm<sup>-3</sup>, of the potassium manganate(VII) solution.

[4 marks]

Concentration	mol dm <sup>-3</sup>

0 1 . 4	<b>Figure 1</b> shows the 25.0 cm <sup>3</sup> pipette used to measure the sodium ethanedioate solution.			
	Figure 1			
	Graduation mark			
	On <b>Figure 1</b> , draw the meniscus of the solution when the pipette is ready to transfer 25.0 cm³ of the sodium ethanedioate solution.  [1 mark]			
0 1.5	Potassium manganate(VII) is oxidising and harmful. Sodium ethanedioate is toxic.			
	Suggest safety precautions, other than eye protection, that should be taken when:  • filling the burette with potassium manganate(VII) solution  • dissolving the solid sodium ethanedioate in water.			
	[2 marks]			
	Filling the burette			
	Dissolving the solid			
0 1.6	State the colour change seen at the end point of each titration.  [1 mark]			

0 1.7	Figure 2 shows the burette containing potassium manganate(VII) solution.					
	Figure 2					
	Tap					
	Give <b>two</b> practical steps needed before recording the initial burette reading.

0 2

The protein fibroin can be broken down into amino acids using an enzyme.

0 2 . 1

A student uses thin-layer chromatography (TLC) to identify these amino acids.

The student identifies two of the amino acids as alanine and serine.

Use **Figure 3** to calculate the  $R_{\mbox{\scriptsize f}}$  value of the unknown amino acid. Show your working.

Use your R<sub>f</sub> value and **Table 1** to identify the unknown amino acid.

[2 marks]

0	5

A mixture of methanoic acid and sodium methanoate in aqueous solution acts as an acidic buffer solution.

The equation shows the dissociation of methanoic acid.

$$HCOOH(aq) \rightleftharpoons HCOO^{-}(aq) + H^{+}(aq)$$

Calculate the mass, in g, of sodium methanoate (HCOONa) that must be added to  $25.0~\text{cm}^3$  of 0.100~mol dm<sup>-3</sup> methanoic acid to produce a buffer solution with pH = 4.05~at 298 K

For methanoic acid,  $pK_a = 3.75$  at 298 K

Assume that the volume of the solution remains constant.
