A-level PHYSICS

Paper 3 Section B Medical physics

Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 35.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 50 minutes on this section.

Section B

Answer **all** questions in this section.

0 1

An eye condition is corrected using a +4.0D lens.

0 1 . 1

Which eye condition could be corrected by using this lens?
Tick (✓) **one** box.

[1 mark]

astigmatism

☐

hypermetropia

☐

myopia

☐

0 1 . 2

Calculate the magnification produced by the +4.0D lens when viewing an object
75 cm from this lens.

[3 marks]

magnification = _____

0 1 . 3

Figure 1 shows a diagram of an eye.

Figure 1

State the name and primary optical function of X, Y and Z.

[4 marks]

Name of X _____

Primary optical function of X _____

Name of Y _____

Primary optical function of Y _____

Name of Z _____

Primary optical function of Z _____

ANSWER IN THE SPACES PROVIDED**

0 2 . 1

An X-ray image is to be made of a broken bone.
The image can be formed on

- photographic film
- a flat panel (FTP) detector or
- an intensifying screen using fluoroscopic image intensification.

State and explain which one of these detection methods should be used in this situation.

Go on to discuss why the other two methods are less suitable.

[4 marks]

Question 2 continues on the next page

Turn over ►

Figure 2 shows an X-ray of a broken bone.

Figure 2

mean diameter of bone = 0.040 m

intensity of incident X-rays = 0.013 W m^{-2}

exposure time of X-ray = 0.80 s

linear attenuation coefficient of bone = 58.3 m^{-1}

0 2 . 2

Calculate an estimate for the X-ray energy that is absorbed by the bone.

[5 marks]

energy absorbed = _____ J

0 2 . 3

State **two** reasons why the estimate of energy absorption in Question **02.2** may be greater than the actual value.

[2 marks]

- 1 _____
- _____
- _____
- _____
- _____
- 2 _____
- _____
- _____
- _____
- _____

0 3 . 1

Sketch an equal loudness curve on **Figure 3** showing the normal response of a healthy ear.
Annotate the **frequency** axis with an appropriate scale.

[3 marks]

Figure 3

0 3 . 2

Describe the procedure used to gather the data for an equal loudness curve.

[2 marks]

Do not write
outside the
box

0 3 . 3

Calculate the intensity of a sound that produces an intensity level of 30 dB.

[2 marks]

intensity = _____ W m⁻²

7

box

0 5 . 1

State the purpose of the magnetic field in a magnetic resonance scanner.

[1 mark]

0 5 . 2

Describe the role of the radio frequency pulses in a magnetic resonance scanner.

[2 marks]

3
