# A-level MATHEMATICS

## Paper 1

Time allowed: 2 hours

### Materials

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

### Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do **not** write outside the box around each page or on blank pages.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

### Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

| For Examiner's Use |      |

| TOTAL              |      |

Answer **all** questions in the spaces provided.

- 1** A curve is defined by the parametric equations

$$x = \cos \theta \quad \text{and} \quad y = \sin \theta \quad \text{where } 0 \leq \theta \leq 2\pi$$

Which of the options shown below is a Cartesian equation for this curve?

Circle your answer.

[1 mark]

$$\frac{y}{x} = \tan \theta \qquad x^2 + y^2 = 1 \qquad x^2 - y^2 = 1 \qquad x^2 y^2 = 1$$

- 2** A periodic sequence is defined by

$$U_n = (-1)^n$$

State the period of the sequence.

Circle your answer.

[1 mark]

$$-1 \qquad 0 \qquad 1 \qquad 2$$

- 3** The curve

$$y = \log_4 x$$

is transformed by a stretch, scale factor 2, parallel to the  $y$ -axis.

State the equation of the curve after it has been transformed.

Circle your answer.

[1 mark]

$$y = \frac{1}{2} \log_4 x \qquad y = 2 \log_4 x \qquad y = \log_4 2x \qquad y = \log_8 x$$

8 The lines  $L_1$  and  $L_2$  are parallel.

$L_1$  has equation

$$5x + 3y = 15$$

and  $L_2$  has equation

$$5x + 3y = 83$$

$L_1$  intersects the  $y$ -axis at the point  $P$ .

The point  $Q$  is the point on  $L_2$  closest to  $P$ , as shown in the diagram.

8 (a) (i) Find the coordinates of  $Q$ .

[5 marks]

Do not write  
outside the  
box

11 The polynomial  $p(x)$  is given by

$$p(x) = x^3 + (b + 2)x^2 + 2(b + 2)x + 8$$

where  $b$  is a constant.

11 (a) Use the factor theorem to prove that  $(x + 2)$  is a factor of  $p(x)$  for **all** values of  $b$ .  
[3 marks]

---

---

---

---

---

---

---

---

11 (b) The graph of  $y = p(x)$  meets the  $x$ -axis at exactly two points.

11 (b) (i) Sketch a possible graph of  $y = p(x)$   
[3 marks]

Do not write  
outside the  
box

11 (b) (ii) Given  $p(x)$  can be written as

$$p(x) = (x + 2)(x^2 + bx + 4)$$

find the value of  $b$ .

Fully justify your answer.

13

**Figure 2** shows the approximate shape of the vertical cross section of the entrance to a cave. The cave has a horizontal floor.

The entrance to the cave joins the floor at the points  $O$  and  $P$ .

## Figure 2

Garry models the shape of the cross section of the entrance to the cave using the equation

$$x^2 + y^2 = a\sqrt{x} - y$$

where  $a$  is a constant, and  $x$  and  $y$  are the horizontal and vertical distances respectively, in metres, measured from  $O$ .

**13 (a)**

The distance  $OP$  is 16 metres.

Find the value of  $a$  that Garry should use in the model.

**[2 marks]**

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

14 The region bounded by the curve

$$y = (2x - 8) \ln x$$

and the  $x$ -axis is shaded in the diagram below.

14 (a) Use the trapezium rule with **5 ordinates** to find an estimate for the area of the shaded region.

Give your answer correct to three significant figures.

[3 marks]
