# GCSE PSYCHOLOGY

Paper 1 Cognition and Behaviour

Wednesday 15 May 2024 Afternoon Time allowed: 1 hour 45 minutes

### **Materials**

For this paper you may use:

• a calculator.

### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.
- Question 17 is a synoptic question in which you will be rewarded for your ability to draw together different areas of knowledge and understanding from across the full course of study.
- Questions should be answered in continuous prose. You will be assessed on your ability to:
  - use good English
  - organise information clearly
  - use specialist vocabulary where appropriate.

# Section A

# Memory

	we more	
	Answer all questions in the spaces provided.	
Only one answ	wer per question is allowed, except where stated otherwise.	
For each ques	stion completely fill in the circle alongside the appropriate answer.	
CORRECT METHOD	● WRONG METHODS 👿 💿 🕸 ෮	
If you want to	change your answer you must cross out your original answer as shown	
If you wish to as shown.	return to an answer previously crossed out, ring the answer you now wi	sh to select
<b>0 1</b> C	ne factor that can affect the accuracy of memory is context.	
V	/hich <b>two</b> of the following are most likely to occur due to context?	
S	hade <b>two</b> boxes.	[2 marks]
Α	We call our new English teacher by our previous teacher's name.	0
В	We cannot remember information during a class test because we revised for the test at home.	0
C	We forget our old mobile phone number since we replaced it with a new one.	0
D	We incorrectly remember our lines in the school play because we have not rehearsed them enough.	0
E	We see the school librarian in the local supermarket and cannot remember his name.	0

Table 1 includes some of the main features of the multi-store model of memory.

Three main features are missing from the table.

Complete all three missing parts of Table 1.

Write your answers in the correct spaces.

[3 marks]

Table 1

Memory store	Coding	Capacity	Duration
Sensory	The same way it is received from the senses	Very limited	
Short term		7 +/– 2 items	Up to 30 seconds
Long term	Mainly semantic		Lasting up to a lifetime

0   3	Explain what is meant by the 'primacy effect' in recall.	[2 marks]

Turn over ▶

0 4	Read the following information.
	In a study into false memory, a researcher asked adult participants to discuss different events from their childhood. The participants' families gave the researcher information about these events.
	One of the events was fake and involved a made-up family wedding where red wine had been spilled on the bride's dress.
	The researcher wrote down every word that the adults recalled.
	He found that two fifths of the participants described details of the wedding, even though the story was made up.
0 4.1	Write two fifths as a decimal.  [1 mark]
0 4.2	There were 200 participants in the study.
	Calculate how many participants did <b>not</b> describe details of the wedding.
	Show your workings.  [3 marks]
	Workings:
	Number of participants

0 4.3	The researcher claimed that his report on the study also contained qualitative data.
	Use the description of the study to justify the researcher's claim.  [2 marks]
	<b>L</b>
0 4 . 4	Ivan was a participant in the study. The researcher asked Ivan about a primary school camping trip to Snowdonia. Ivan remembered that Snowdonia is in Wales.
	He also recalled celebrating his best friend's birthday during the trip and learning to paddle a canoe. As an adult, he still enjoys paddling a canoe on a nearby lake.
	Episodic, procedural and semantic are different types of long-term memory.
	Identify <b>one</b> example of <b>each</b> type from Ivan's discussion about his school trip.
	Write your answers in the correct spaces.

1	1	Read the following information.
---	---	---------------------------------

A researcher investigated whether participants found it easier to perceive distance if the objects used in the study were familiar to them.

The researcher placed objects at various distances away from the participants. The researcher then asked the participants to estimate how far away from them each object was in metres.

Some objects were familiar to the participants and other objects were unfamiliar to the participants.

Each participant saw an identical set of objects.

The researcher counted up how many times the participants correctly estimated the distance within one metre.

**Table 2** shows the results from the study.

**Table 2** The number of times the distance was correctly estimated within one metre by participants viewing familiar and unfamiliar objects

	Familiar objects	Unfamiliar objects
Number of times the distance was correctly estimated within one metre	57	12

1   6	during the sensorimotor stage of development.
	The researcher and an assistant decide to carry out a controlled observation study.
	One behaviour being observed is 'shaking a rattle'.
	Describe how you would carry out this controlled observation study.
	You need to:
	<ul> <li>identify a suitable age range of the target population</li> <li>suggest two suitable behaviour categories that could be used during the observation. Do not include 'shaking a rattle' as one of your categories</li> <li>briefly describe two ways the researcher could make sure there is interobserver reliability</li> <li>identify one way the researcher could make sure her study is carried out in an ethical manner.</li> </ul>
	[6 marks]

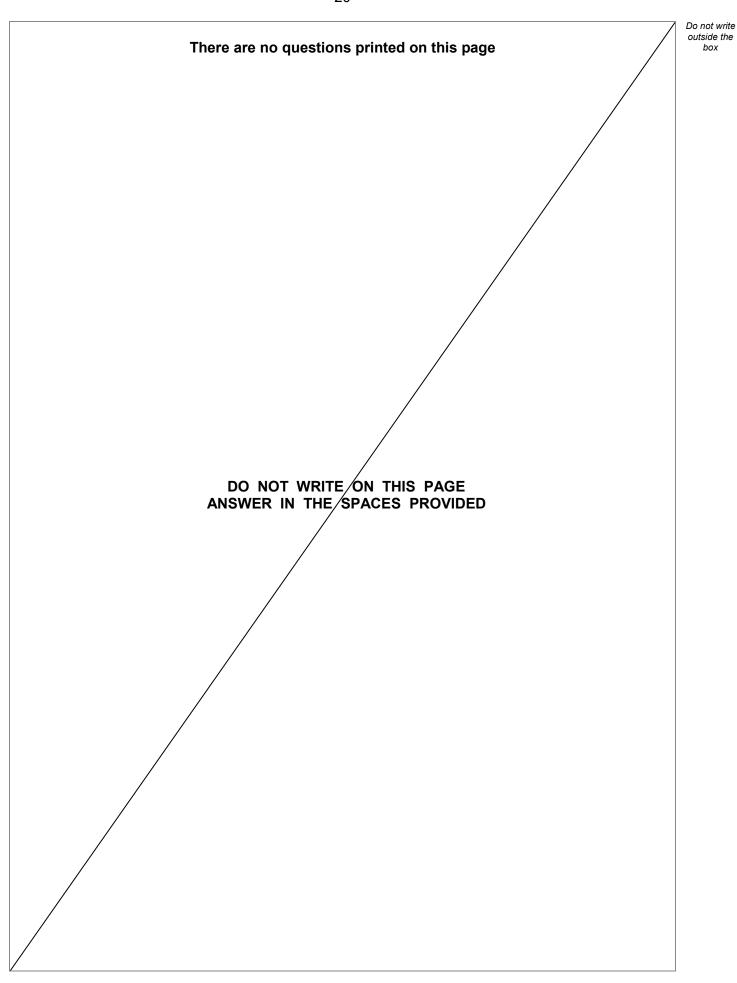

Psychologists have developed many ways to study the brain. A psychologist called Penfield used a method called the Montreal procedure to study the cortex. The method involved gently stimulating parts of the cortex with electricity. Participants were asked to describe any sensations that they experienced.
Outline early brain development.
Discuss the appropriateness of Penfield's method to investigate the brain before birth and during the early years of life.  [9 marks]

### Watch out - dinosaurs about!

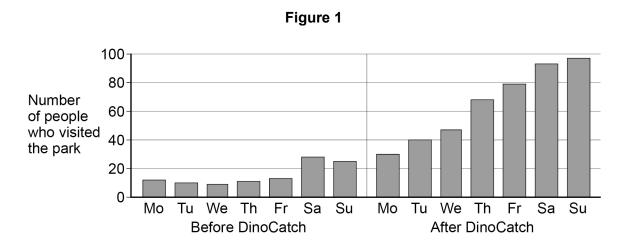

A mobile phone company produced an app called DinoCatch to encourage people to exercise and enjoy more time outdoors. Someone playing DinoCatch would 'catch' digital dinosaurs on their mobile phone. These dinosaurs appeared on their screen when the player arrived at outdoor locations such as parks.

A researcher wanted to assess the impact of DinoCatch in the town of Waterlake. She counted the number of visitors to Waterlake Park between 1–2 pm during each of the 7 days before DinoCatch was introduced and at the same time during each of the 7 days afterwards.

20.1	Write a suitable <b>alternative</b> hypothesis for this study.	[2 marks]
20.2	Identify <b>one</b> extraneous variable that might affect the results of this experim	ent. [1 mark]

The bar chart in **Figure 1** shows the number of people who visited Waterlake Park in the 7 days before **and** after the introduction of the DinoCatch app.

2 0 . 3 State the number of people who visited the park on the Tuesday (Tu) **after** the DinoCatch app was introduced.

[1 mark]

Number of people

2 0 . 4 Outline **two** conclusions that can be drawn from the data in the bar chart.

[2 marks]

Conclusion 1				
Conclusion 2				

Question 20 continues on the next page

At the end of the 14-day study, the researcher interviewed 10 participants about their experiences of using the DinoCatch app. She wanted to find out if there was a correlation between time spent outdoors and improvement of mood.

She asked the participants how many hours they had spent outdoors playing DinoCatch during the 7-day period after the app was released. She also asked participants to rate how much their mood had improved on a scale of 0–10.

A rating of 0 meant that their mood had not improved at all.

A rating of 10 meant that their mood had improved a lot.

The results are shown in Table 3.

Table 3 Number of hours playing DinoCatch and mood improvement rating

Participant Number	Number of hours spent outdoors playing DinoCatch	Mood improvement rating
1	7	5
2	3	5
3	12	6
4	15	7
5	4	4
